

# Buggy Cars Rating - Critical Bugs

## 1. Author Information is not update in the grid if the user vote without comment

### Description:

Author information is not updated if the user votes without a comment. It only updates the Votes count.

### Steps to reproduce:

1. Go to the “Overall Rating” page. Select a car model “AVENTADOR” of car make “Lamborghini”. (As it shows author information in the grid)
2. Then vote for the car without the comment.

### Expected:

Should update the author information in the grid without the comment.

### Actual:

No record indicates the voted user if the user doesn't put a comment on the comment box.

Lamborghini

• Engine: 6.5l

• Max Speed: 350km/h

Votes: 603

#### AVENTADOR

A car like the **Lamborghini Aventador** is awesome enough in its own right that it really doesn't need an aftermarket program. Still, there are those who prefer to give it a tuning program just to see how much faster and more powerful the car can go. That's perfectly understandable. But every so often, you chance upon a car that is the recipient of not one, but two aftermarket programs.

This Lamborghini Aventador is the perfect example of that. By and large, this is an Aventador, albeit a special edition one that was released in limited quantities by Oakley Design back in 2012. It was nicknamed the "Dragon Edition" and only 10 units were made, each coming with an aero kit made up of a fixed carbon fiber rear spoiler, redesigned front bumper, and rear air vents. It also had individually-numbered plaques and embroidered dragons on the doors, and most importantly, a massive performance bump that gave the Aventador's 6.5-liter V-12 engine 760 horsepower 500 pound-feet of torque to play with.

### 3. Buggy Rating button is not responsive when navigate to any car make page

#### Description:

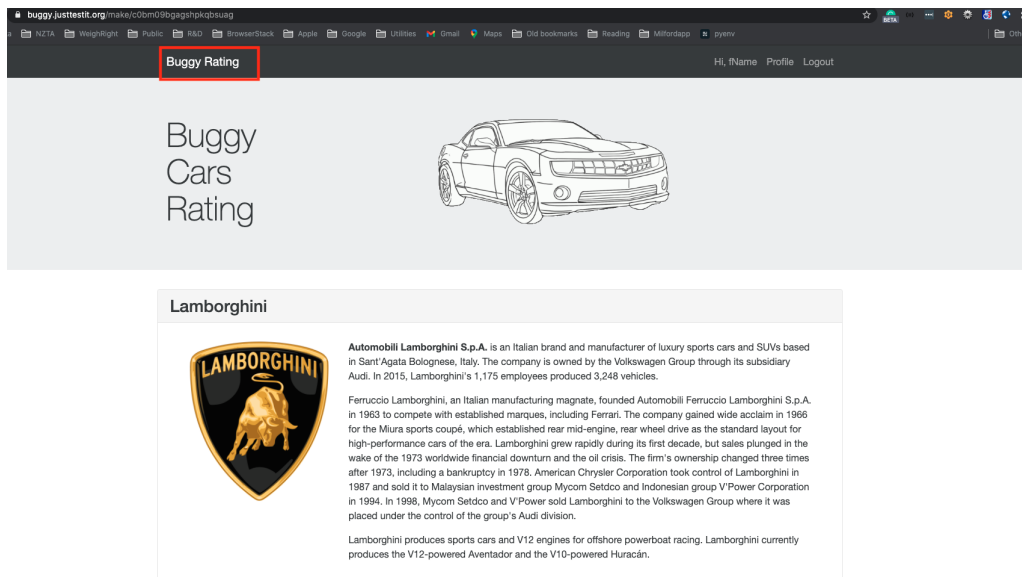

Buggy rating button is not responsive when navigating to any car make page. Also the same issue occurs when users navigate to the overall rating page and select a car make.

#### Steps to reproduce:

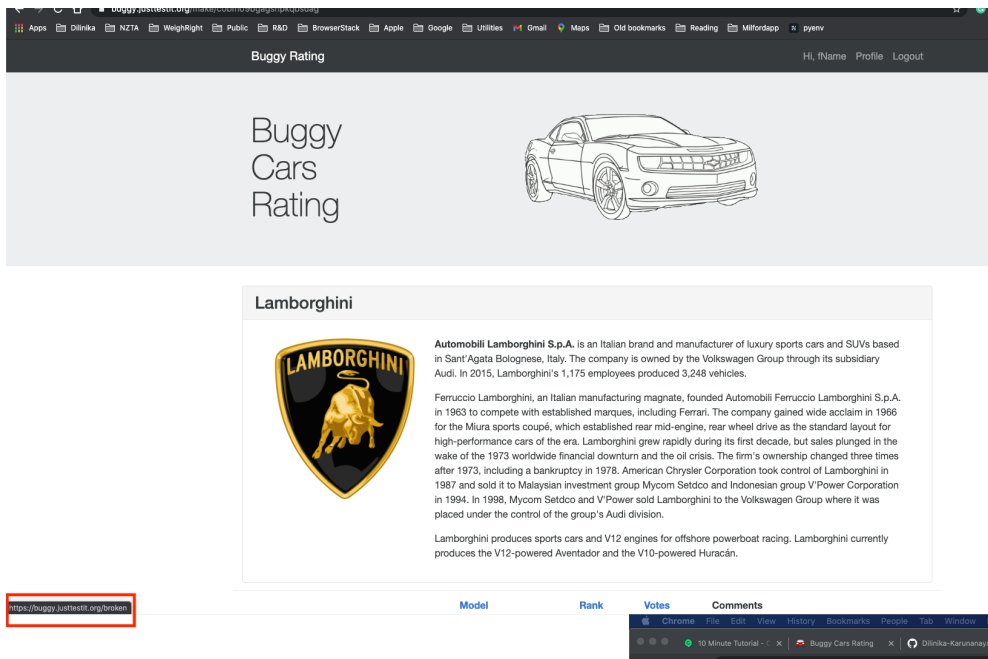

1. Registered user logged in to buggy cars rating page
2. And click on “Popular Make”

3. And then try to go back to home page by clicking “Buggy Rating” button

4. Button is not responsive and does not navigate back to Home. Gives and not friendly error message

### Expected:

User should be able to navigate back to home page when click the buggy rating button on the top of the page

### Actual:

User unable to navigate back to home page. It popped up a non user friendly error message.

#### 4. In Overall rating page, page numbers are not showing correctly

##### Description:

In “overall rating” page page numbers are showing up to 5 but user can go upto page 6. But no data presented in that page.

##### Steps to reproduce:

Go to the “Overall rating”page and traverse through the pages.

**Expected:** After the last page( In this scenario, page no 5) the forward button should be disable.

##### Actual:

Users can page more than 5 and no data present at the last page. Also it has incorrect wording.
